## Help Protecting your Business

We understand the unique security required by the industry today. Our products conform to most of banking industry and authorities.

Barcode is printed on the receipt slip to track products which prevents exchange and loss of the bag.

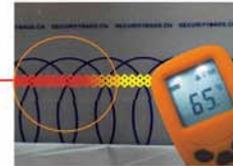

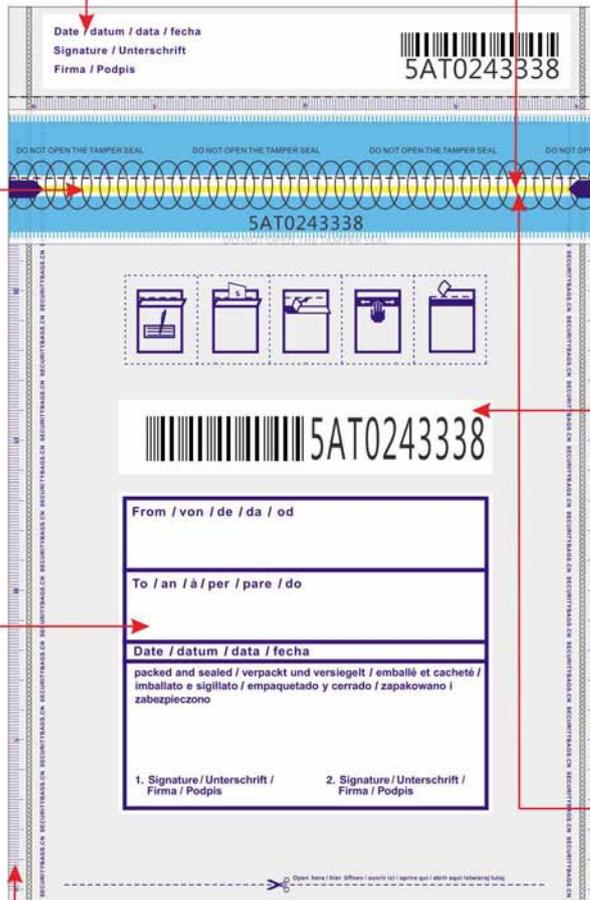

The letter "stop" is visible once the tape is torn open if temperature reaches or over  $-50^{\circ}\text{C}$  which avoids to be torn open by using coolant.

Each bag is printed with writable area which is convenient for signature confirmation and prevents forgery.

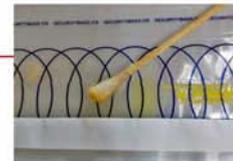

Avoiding to be cut off and rewelded, there are unique double weldings with staff gauge and small characters printed along the both sides.

The yellow printing ink will turn RED if temperature reaches or over  $65^{\circ}\text{C}$  and could not reverse which avoids opening by heating and microwave oven.

Avoiding to be exchanged and fabricated, unique tracking security codes are printed on the bag including large size numeric codes which helps CCTV monitor easily, and barcode and QR code could be quickly input into computer system.

Yellow water-soluble printing ink is printed on the opening side, which will dissolve in water or solvent and avoids the tape to be opened by solvent.
